Description

The RESCCUE project aims at supporting Pacific island countries and territories in implementing integrated coastal management (ICM) so as to increase their resilience to climate change, resorting especially to economic analysis and economic and financial mechanisms. The RESCCUE project operates in one to two pilot sites in four countries and territories: Fiji, the Northern and Southern Provinces of New Caledonia, French Polynesia, and Vanuatu.

Project Objectives

Specific objectives at pilot sites level are:

1. Strengthen integrated coastal management and adaptation to climate change;
2. Strengthen the use of economic analysis for integrated coastal management;
3. Ensure economic and financial sustainability of integrated coastal management;
4. Facilitate learning, dissemination and replication of experiences gained from pilot sites.
